

Our free **EMR-integrated toolkit** for heart failure, anxiety disorders and depression, diabetes, and COPD gives primary care clinicians easier access to the information they need at the point of care. The toolkit is also designed to be modular, providing flexibility during patient appointments.

Heart failure

- ✓ Investigations into heart failure diagnosis
- ✓ Integrated SOAP note documentation for streamlined visit summaries
- ✓ Easy access to reference information, picklists to facilitate appropriate medication selection, built-in notification flags to change medication if the patient's condition is worsening, and more

Anxiety disorders and depression

- ✓ Practical assistance for screening and assessment
- ✓ Tool provides multiple ways to enter the GAD-7 and PHQ-9 Metrics
- ✓ Optimized guidance on management, including documentation of information provided to the patient (i.e., psychotherapy, lifestyle considerations)
- ✓ Shareable resources for patient self-management

Diabetes

- ✓ Access to the Canadian diabetes risk assessment questionnaire (CANRISK) to determine risk level and screening frequency
- ✓ Medication reference tool provides information regarding non-insulin therapy, insulin therapy, and combination products
- ✓ Shareable supports for patient self-management

COPD

- ✓ Calculators capture scores – i.e., COPD Assessment Test (CAT), Modified Medical Research Council (mMRC) Dyspnea Scale – that will be used when initiating pharmacological treatment
- ✓ Medication form based on CTS severity as documented in Assessment module
- ✓ Patient-facing action plan to be printed and shared

We also provide complimentary **change management** (Amplify Care) to help with implementation and optimal use, as well as **academic detailing** services (Centre for Effective Practice).
